

PowerSchool CTS (Career and Technology Studies) is a PowerTeacher Pro customization that streamlines the administration of a CTS curriculum. Our CTS Plugin allows teachers to have control over their modules and student enrollment without having to burden an already busy administrative office, thus saving time for both teachers and administrative staff. CTS adds reporting capabilities not readily available through PowerSchool or other means, including assignments and marks for modules, progress reports (all or some students), and who created modules.

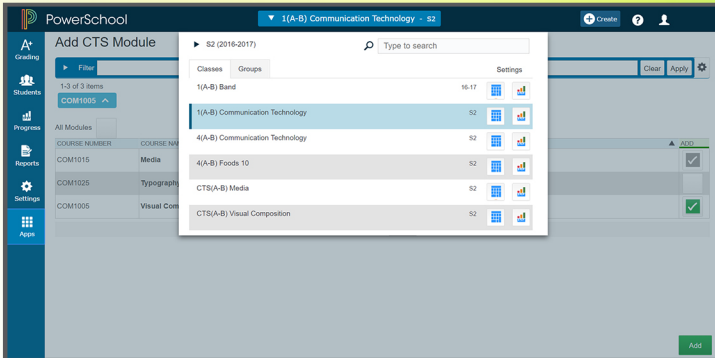

-  Enhances PowerTeacher Pro
-  Allows teachers to add their own modules and students in real-time
-  Produces reporting specific to CTS

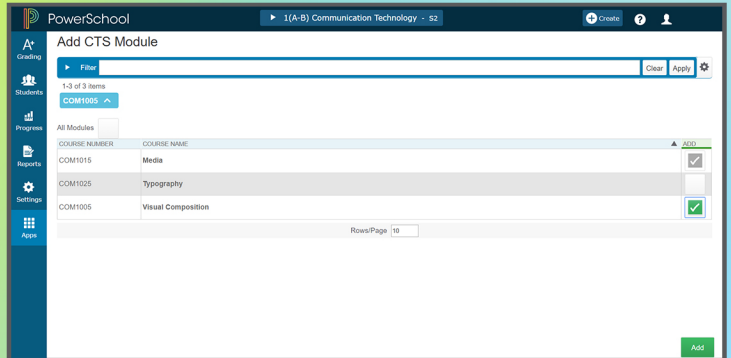

-  Reduces data duplication and errors
-  Provides easy filtering of available modules
-  Imports into PowerSchool period outside of bell schedule

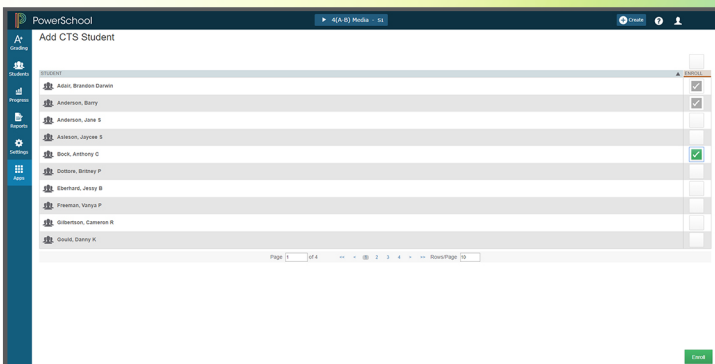

CAREER AND TECHNOLOGY STUDIES

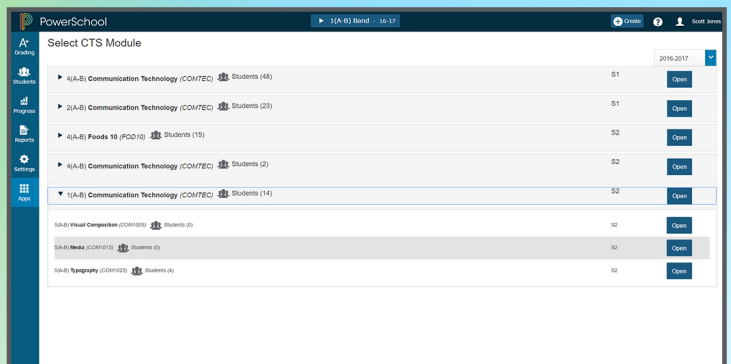

1. Select Header

2. Add Module(s)

3. Add Student(s)

4. Manage Modules
